Budapest, Hungary

PROFILE

Computer Science graduate from ELTE, Budapest. Founded **backbencher.cc**, an AST-native code intelligence platform with 13 brain tools. Contributed to **Microsoft VS Code** (3 merged PRs) and **Flutter** (2 PRs, 1 approved). Built **ProxiCall**, a production super-app with Stripe payments and 32-language translation. BSc thesis on ML-based phishing detection achieved 96.45% accuracy with 725 automated tests.

EDUCATION

BSc Computer Science — Eötvös Loránd University (ELTE)

September 2023 - July 2026

Faculty of Informatics. Stipendium Hungaricum scholarship.

Selected for BSc Computer Science at **Tsinghua University** (world #1 in CS, US News) with full scholarship.

EXPERIENCE

Founder & Developer

March 2026 – Present

backbencher.cc

Building an open-core AST-native code intelligence platform that indexes codebases into a SQLite knowledge graph. Ships with 13 brain tools for semantic search, call-graph traversal, AST-precise refactoring, architecture detection, cross-language migration planning, and security scanning across 39 languages.

Full-Stack Developer

September 2025 – Present

ProxiCall

Production Flutter super-app: Stripe Connect payments, geo-fenced content delivery, 32-language auto-translation pipeline, and AI-segmented notifications. Built five integrated systems: Content Management, Payment Management, Order Management, Notification Management, and Entity Notification System.

Security Engineer

April 2020 – May 2025

Offensive security and privacy-preserving technology across multiple independent engagements.

- DNS spoofing attack simulation and network-layer prevention techniques
- MITM attack execution, traffic analysis, and defense hardening
- Cross-site scripting (XSS) exploitation, payload crafting, and input sanitization
- Wireless network penetration: WPA/WPA2 cracking, deauthentication, rogue AP deployment
- OSINT reconnaissance: passive and active information gathering via social media, Shodan, WHOIS
- Privacy-preserving communication: PGP/GPG encryption, Tails OS, OnionShare, SecureDrop
- Vulnerability scanning: SQLi, XSS, and secrets detection across web applications

OPEN SOURCE CONTRIBUTIONS

Microsoft (VS Code)

[#319804](#) Performance optimization for VS Code's editor component caching computed styles.

[#319806](#) Improves debugging DX by logging breakpoint/watch expression load errors.

[#314005](#) Memory leak fix in chat components — merged via [#319176](#), credited in PR body.

Flutter

[#186076](#) Security hardening — prevents command injection in Flutter dev tooling scripts.

[#187008](#) Gesture arena memory fix — approved by Flutter team, pending merge.

PROJECTS

- **backbencher.cc (bb)** [live](#) · [repo](#) — My primary project — an open-core AST-native code intelligence platform that indexes entire codebases into a local SQLite knowledge graph. Ships with 13 brain tools.
- **ProxiCall** [live](#) · [repo](#) — Production Flutter proximity super-app — location-based content delivery, Stripe Connect payment management, order management, 32-language auto-translation, ...
- **PhishGuard** [live](#) · [repo](#) — BSc Thesis — phishing detection system combining XGBoost ML (96.45% accuracy), NLP with 10 tactic detectors, and OSINT enrichment (WHOIS, DNS, VirusTotal).
- **tree-sitter-clean** [repo](#) · [npm](#) — Clean grammar for tree-sitter — enables code intelligence, syntax highlighting, and AST parsing for the Clean programming language.
- **hide-and-lock** [repo](#) — CLI utility for encrypting sensitive files with session-based isolation and master key recovery.
- **phantomVault** [repo](#) — Secure C++ storage utility with encryption support.

TECHNICAL SKILLS

Languages TypeScript, JavaScript, Python, Dart, C++, Shell/Bash, PowerShell, SQL, HTML/CSS, Go, Rust, Java, Kotlin

Frameworks Flutter, Next.js, React, Node.js, Express, Tailwind CSS, Flutter Bloc, tRPC

AI & Models OpenAI API, Google AI Studio, Mistral, Cohere, GitHub Copilot, Claude Code, Antigravity, OpenCode, DeepSeek v4 Pro, MiniMax M2.7, Kimi K2.6, Sonnet 4.6, Gemini 3.1 Pro Preview, GLM 5.1

Tools & Platforms Git, VS Code, Bun, npm/pnpm, Tree-sitter, LSP, MCP, curl/jq · Supabase, Firebase, Stripe, Docker, GitHub Actions, SST (Serverless Stack), SQLite, PostgreSQL
